

CT20

Clip-On Tuner

Samson's CT20 Clip-On Tuner combines precision tuning capabilities with a hands-free design that makes accurately tuning guitars, basses, stringed, woodwind or brass instruments easier than ever.

The CT20 attaches securely to the headstock of your guitar or bass, as well as a variety of other stringed and wind instruments, for hands-free tuning. A dual 360° ball-jointed clip stems from the rear of the tuner, allowing you to view the display at any angle. In addition, the tuner's design includes a large, full color LCD display for quick tuning in any lighting environment. Whether you're in a well-lit studio or on a dark stage, the CT20's display brings vibrant colorization that makes all of the tuner's functions beautiful and easy-to-read.

With the goal of keeping your instruments sounding performance-ready at all times, the CT20 is packed with comprehensive tuning capabilities. It supports a wide range of calibration from A 410 to 490Hz, while its smooth, real-time display provides precise and accurate tuning. The tuner offers chromatic, guitar and bass tuning modes, as well as a built-in mic for tuning your acoustic instruments through audible sound and a piezo sensor that calibrates by vibration. The CT20 also features a flat drop tuning/transposition setting that allows you to easily tune down your instrument.

Powered by an included single CR2032 battery, the CT20 provides two operating modes for maximizing battery life. After ten seconds of inactivity, the tuner automatically enters an energy-saving mode that dims the display without shutting off the tuner. After five minutes, the unit will power off completely.

Samson's CT20 Clip-On Tuner's compact design helps to make it the ultimate tuning accessory that every musician will want in their gig bag.

FEATURES

- Full color LCD display
- Integrated clip with 360° movement for easy viewing
- Chromatic, guitar and bass tuning scales
- Built-in mic or clip-on setting for precise tuning
- Flat tuning/transposition
- Real-time response for tuning accuracy
- Pitch calibration ranges from A 410–490Hz.
- Powered by a single CR2032 battery (included)
- Auto power-off and energy-saving functions for maximum battery life

Clips to any guitar or bass
