

HF44 Bass Fuzz Pedal

POSITIONING

Hartke's HF44 Bass Fuzz Pedal features all-analog circuitry for the fat, punchy distortion heard in classic stompboxes. Its FET design delivers the high-voltage saturated sound of a tube, while Mid and Tone controls dial in the harmonic character and high-frequency edge needed to drive all your aggressive riffs.

FEATURES

Music Mayhem

Not everyone thinks of distortion as being "musical". This ends with the HF44. The pedal's ability to instantly add "body" and "thickness" to your tone with exceptional headroom is a testament to its all-analog design. Capturing the essence of an opened-up tube amplifier has never been easy, but the live, dynamic tone of the HF44 succeeds where others have failed.

Why Hartke?

From the original aluminum XL Series bass speakers to the revolutionary HyDrive paper/aluminum hybrid cone drivers, Hartke has been dedicated to the evolution of bass amplification and tone since the company's inception. The new HF44 pedal continues Hartke's mission of providing bass players with high-caliber sound and rugged, tour-tested reliability.

APPLICATIONS

- Live performance
- Studio recording
- Practice/rehearsal

SPECIFICATIONS

Input Impedance.....	1M Ω
Output Impedance.....	10K Ω
Power Options.....	9V battery, external AC (9V DC, regulated minimum 300mA negative tip)
Product Weight	0.51lb (230g)
Gift Box Dimensions	5" x 3.5" x 2.5" (127mm x 89mm x 64mm)
Gift Box Weight.....	0.75lb
Master Carton Quantity.....	20
UPC (US only).....	809164018742
SKU (US only).....	HPHF44
